COMPLIANCE

CASE STUDY | CLIENT CONFIDENTIAL

**RAISING THE BAR FOR EMERGENCY
PREPAREDNESS AND COMPLIANCE**

CHALLENGE

One of the largest operators in the US, transporting over one-third of the national oil and gas supply, set a goal of being the "gold standard" in emergency preparedness and environmental, health and safety (EHS) compliance. EHS compliance is challenging for the client due to the broad scope of the country that could be affected. Our client partnered with Witt O'Brien's because of like-minded core values we shared, such as environmental stewardship and public responsibility.

SOLUTION

We provided stand-by emergency response capabilities, allowing their in-house team to "surge" with our support in case of a major incident. Our key regulatory specialists utilize state-of-the-art software designed to support positive momentum in compliance consulting, planning, and program management. We then expanded our partnership to support their EHS compliance program - which continues to grow through acquisition.

RESILIENCE DELIVERED

We continue to support our client's preparedness and compliance program. This includes updating and management of over 600 plans, utilizing our web-based planning software, ePlanPro®. Our response services include support for training and exercising, as well as immediate deployment on site to help them manage live incidents wherever they happen. A crisis does not have to be catastrophic, and together through aggressive pre-planning we aim to help our clients be prepared.

WITH YOU WHEN IT COUNTS

ENERGY

Energy companies that are prepared for disruption consistently outperform those that try to respond on the fly. That's where we come in. We partner with you to identify the "ifs" and prepare for the "whens."

Our effectiveness is built on deep experience. We've managed thousands of incidents, large and small.
